

W(3,3) Eigenvalue Spectrum — SRG(40,12,2,4)

Three eigenvalues encode gravity, matter, and gauge sectors

$$E = n \blacksquare \times k = 40 \times 12 = 480 = |\Phi(E \blacksquare)|$$

$$\alpha \blacksquare^1 = k^2 - (|r| + |s| + 1) = 144 - 7 = 137$$
